-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

DETAILED ACTION

Oath/Declaration

1. The oath or declaration is defective. A new oath or declaration in compliance with 37 CFR 1.67(a) identifying this application by application number and filing date is required. See MPEP §§ 602.01 and 602.02.

The oath or declaration is defective because:

Non-initialed and/or non-dated alterations have been made to the oath or declaration. See 37 CFR 1.52(c).

Claim Objections

2. Claims 1 and 2 are objected to because of the following informalities:
 - a. At lines 6 and 8 of claims 1 and 2, it is suggested to change the limitation “said center terminal” to read --said at least one center terminal-- to maintain consistent claim terminology.

Appropriate correction is required.

Claim Rejections - 35 USC § 112

3. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

Art Unit: 3736

4. Claims 1 and 2 rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

5. Claim 1 recites the limitation “said patient terminal” in line 5. Prior to this recitation, the Claim recites patient terminals, which indicates more than one patient terminal. It is unclear whether the system includes a plurality of patient terminals or if the system only includes one patient terminal, rendering the claim indefinite.

6. Claims 1 and 2 recite the limitation “the patient terminal” in lines 4, 6, 8 and 9. This limitation refers to one patient terminal, however multiple patient terminals were previously disclosed. It is unclear whether the system includes multiple patient terminals or if the system only has one patient terminal, rendering the claim indefinite.

7. Claim 2 recites the limitation “said patient terminal” in lines 1 and 2. Prior to this recitation, Claim 1, a claim from which claim 2 depends, recites “patient terminals”, which indicates more than one patient terminal. It is unclear whether the system includes a plurality of patient terminals or if the system only includes one patient terminal, rendering the claim indefinite.

Claim Rejections - 35 USC § 102

8. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Art Unit: 3736

9. Claims 1 and 2 are rejected under 35 U.S.C. 102(e) as being anticipated by Kondo et al. (U.S. Patent Number 5,586,254).

In regard to claims 1 and 2, Kondo et al. disclose a system for managing and operating a network by physically imaging the network. The system includes at least one center terminal and additional terminals all connected via communication lines in a common network configuration (col. 39, lines 62-67; col. 40, lines 1-40). Kondo et al. disclose data shared throughout the networked terminals include image data. Each additional terminal is provided with a room illumination light for illuminating a room in which the additional terminal is disposed (col. 30, lines 19-67). The center terminal and additional terminals of the Kondo et al. system are arranged in a hierarchical network arrangement, each including an operating means for controlling the intensity of the room illumination light.
